Cilji:

Objectives:

Študent spozna klasifikacije bolezni in se seznanja z njihovimi vzroki in s pomenom diagnostične patologije v klinični praksi. Predmet temelji na klasični patologiji in na napredku celične in molekularne biologije. Študent spozna ob študiju mehanizmov bolezni procese pomembnih bolezenskih kategorij	The student is introduced to the classification of diseases, their causes, and the importance of diagnostic pathology in clinical practice. The course is based on classical pathology as well as on the current knowledge of cellular and molecular biology. The student learns basic disease mechanisms which are fundamental to understand specific diseases.
Predvideni študijski rezultati: Študent bo spoznal osnovne morfološke in funkcijske značilnosti bolezni.	Intended learning outcomes: Basic understanding of morphological and functional characteristics of diseases.

Znanje in razumevanje: Pripravljen bo na študij specifičnih patoloških procesov v različnih organih in organskih sistemih. Prenosljive/ključne spretnosti in drugi atributi: Rezultati študija so pomembni predvsem za varno in uspešno izvajanje zdravljenja.	Knowledge and Understanding: The student is prepared for study of specific pathological processes in different organs and systems. Transferable/Key Skills and other attributes: Results of the study are oriented primarily towards the practising medicine safely and effectively.
